Handmade resin art · Coimbatore, Tamil Nadu

AI Messaging Assistant

Proposal — instant, accurate replies on WhatsApp & Instagram

PREPARED FOR	PREPARED BY	VERSION	DATE
Saba Art Coimbatore, Tamil Nadu	**Tecza** Development team	**1.1**	**6 October 2026**

Summary

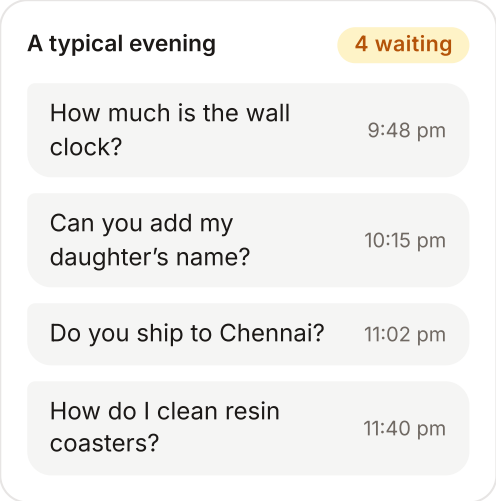

A friendly assistant that answers your customers straight away — so you can spend less time typing and more time making art.

The challenge

Every day, customers message Saba Art on WhatsApp and Instagram with the same questions. How much is this? Do you deliver to my area? How do I look after it? Can you add a name?

Many of these messages arrive late at night. When a reply takes hours, an interested buyer can easily move on.

And every hour spent typing the same answers is an hour away from your workbench.

Our solution

An AI assistant that replies instantly, using Saba Art's own price list, delivery charges and policies.

Anything sensitive is handed straight to you — refunds, complaints, payment questions, or anything it isn't sure about.

A simple dashboard on your phone to see every chat, reply yourself, and stay in control.

A working demo is ready to show you today. This proposal explains how it works, what it will and won't do on its own, the two-phase plan to take it live, and the investment involved.

Replies in seconds
Day or night, weekends and holidays.

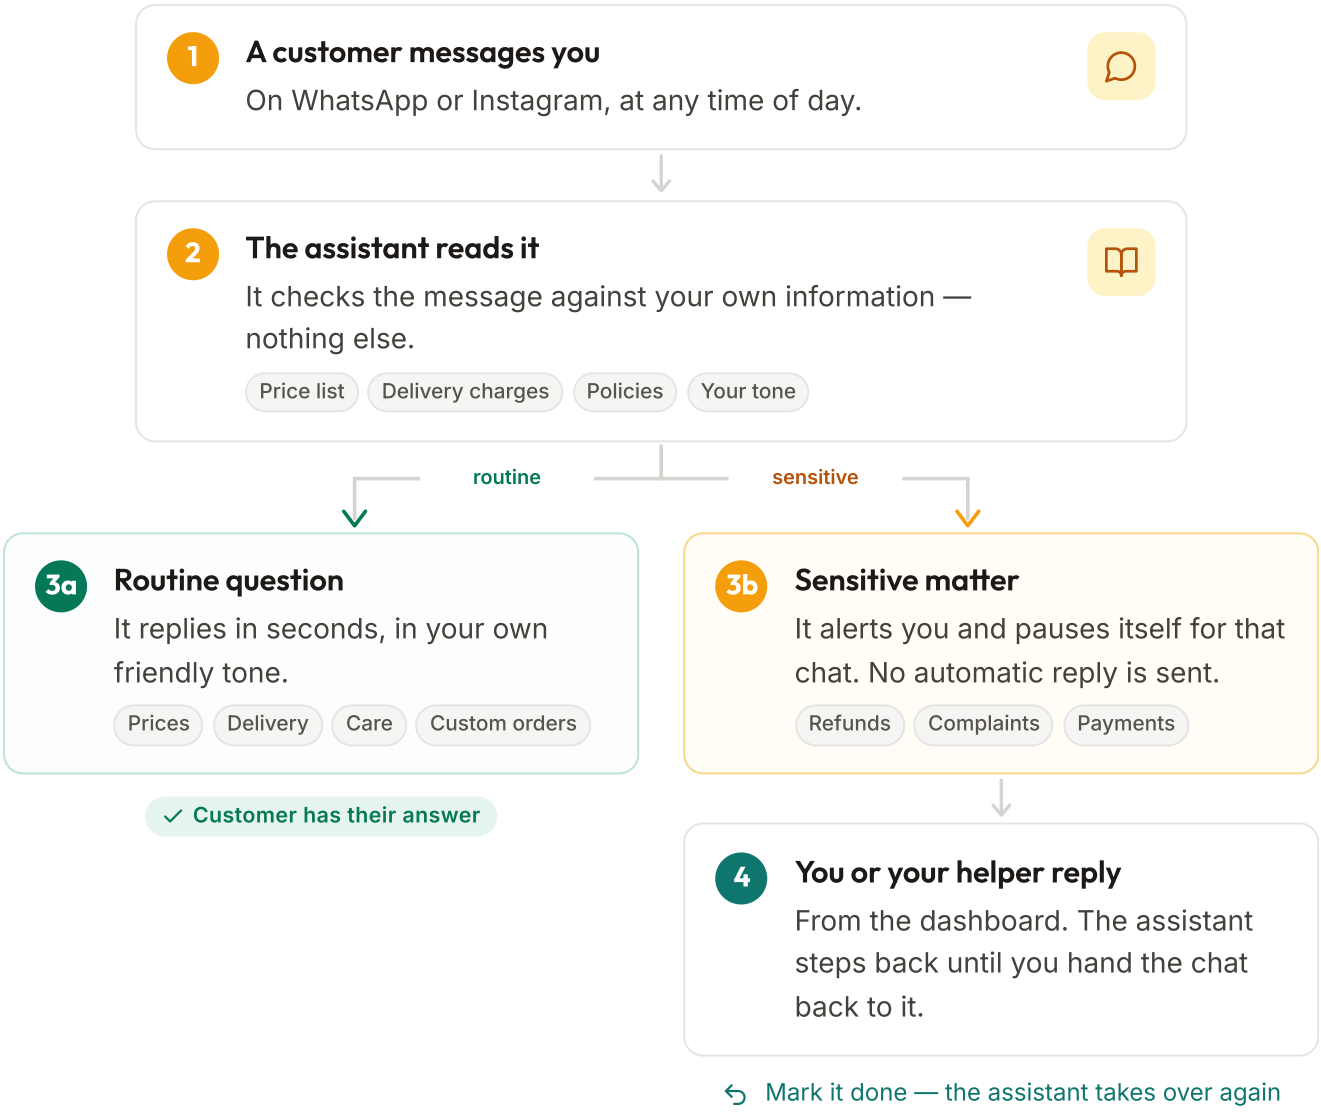

Never makes up a price
Answers only from your price list.

You stay in control
Sensitive chats always come to you.

Works on your phone
Install it like an app, with alerts.

How it works

Here is what happens each time a customer sends Saba Art a message.

Good to know

Many messages, one reply
If a customer sends a few short messages in a row, the assistant waits a moment and answers them together.

Step in any time
If you reply to a customer yourself, the assistant notices and stays out of that chat.

Nothing is lost
Every message and reply is saved, so you can read the whole conversation at any time.

What it handles — and what comes to you

The assistant only answers what it can answer from your own information. Everything else is handed over to you (in technical terms, “escalated”).

Handled automatically

- ✓ Prices of the products on your list
- ✓ Delivery time and charges by area
- ✓ Care instructions
- ✓ Custom-order options for listed products — for example, a name on a clock
- ✓ How many days each product takes to make

Always comes to you

- → Refunds, returns and cancellations
- → Complaints
- → Damaged or wrong items
- → Payment questions, “I’ve paid” or “Where is my order?”
- → Products that are not on your list
- → Anything it isn’t sure about

The assistant never confirms a payment and never makes up a price — if it isn’t in your price list, it hands over to you.

When a chat comes to you

1

You get an alert

A notification on your phone, with an email as a backup, saying which customer needs you and why.

2

The assistant goes quiet

It won’t reply in that chat while you or your helper are handling it.

3

You hand it back

When you mark the chat as done, the assistant looks after that customer again.

Example conversations

These are real replies from the working demo. The demo uses a sample price list — once set up, the assistant will use your own prices, policies and tone.

A Anjali — WhatsApp

How much is the ocean coaster set?

ASSISTANT

Hi! 😊 The Ocean Coaster Set of 4 is ₹1,200. We can customise colours and add a name too! Lead time is about 5 days. Interested?

Price question — answered from the price list

R Rahul — Instagram

Do you deliver to Bangalore?

ASSISTANT

Yes, we deliver all over India! Bangalore takes 7-10 days, and shipping is ₹120. Want to place an order?

Delivery question — time and charge by area

K Kavya — WhatsApp

I want a custom clock with my daughter's name

ASSISTANT

Of course! 💞 The 12 inch clock with her name is ₹2,800. Which colours does she like? I'll send some options!

Custom order — options from your price list

S Suresh — Instagram

I want a refund

No automatic reply sent

Handed over to you — Refund request

Alert sent to you

Sensitive — the assistant pauses for this chat

Your tone, your words. Before going live, you share a few example replies written the way you normally talk to customers. The assistant follows that style — warm, short and friendly.

Key features

Everything you need to keep customers happy without being glued to your phone — and you can update your price list yourself, any time.

Instant replies, 24/7

Routine questions are answered in seconds — late at night, on Sundays and during festival rush.

Uses only your information

Answers come from your price list, delivery charges and policies. If it isn't there, it hands over to you.

Knows when to hand over

Refunds, complaints, payment claims and anything unclear come straight to you, with an alert.

Your helpers can join

Give helpers their own login. They see only the chats handed to them — nothing else.

Dashboard on your phone

Install it on your home screen like an app, and get a notification for every new hand-over.

Pause any time

One switch stops all automatic replies. New messages are still saved for you to answer.

See how it's doing

Messages received, how many were answered automatically, and how quickly customers got a reply.

Full history

A record of every reply — whether it came from you, a helper or the assistant — and when.

Who sees what

You (the owner) see everything: all chats, your price list, reports, settings and the full history. Helpers see only the chats handed over to them, so customer details stay private.

Roadmap — two phases

We build in two clear steps: first the demo, then going live with your real customers — together with tools for orders and customers.

1 **Demo**
By 20 Oct 2026
In progress

2 **Go live, with orders & customers**
By 30 Oct 2026
Next

PHASE 1 Demo — In progress

Target: 20 Oct 2026

- AI replies to routine questions
- Hand-over to you or your helpers
- Dashboard for owner and staff
- Edit your price list yourself
- Reports (analytics)
- Activity history
- Test mode — try it safely with pretend customers

PHASE 2 Go live, with orders & customers — Next

Target: 30 Oct 2026

- Connect your real business WhatsApp number and Instagram account
- Meta business verification and app approval (review time is set by Meta)
- Replies sent to real customers
- Alerts on your phone and by email
- Order board: pending → confirmed → in production → dispatched → delivered
- Customer lists: favourites, priority, repeat buyers

After go-live

Support is included for the first 3 months — monitoring, fixes, small updates and help with your price list. After that, support is charged based on the issues that come up and any new requirements.

What we need from you

A short checklist to get Saba Art live. Don't worry if some of this is new — we'll guide you through each item during setup.

Accounts & documents

- [ ] **Facebook Business (Meta Business) account**
  In the business name. WhatsApp and Instagram are connected through it.
- [ ] **Instagram as a Professional account**
  A free switch in Instagram settings. Needed for automatic replies.
- [ ] **A phone number for WhatsApp**
  One that isn't already being used on the WhatsApp app.
- [ ] **Business documents for Meta verification**
  For example, your business registration certificate or PAN.
- [ ] **A short privacy-policy page**
  Meta asks for one. We can help you prepare it.

Your business details

- [ ] **Your price list, delivery charges and policies**
  Confirm what's correct today — this is what the assistant will use to reply.
- [ ] **A few example replies in your tone**
  How you'd normally answer a price or delivery question.
- [ ] **Names and emails of your helpers**
  Anyone who should get their own login to the dashboard.

When we need it

The accounts and documents are needed before Phase 2 (going live) — please share them as early as possible, because Meta's review takes time. Your price list, policies and example replies can be shared any time — the sooner the better, so the demo can show your real details.

Your accounts stay in your name. The WhatsApp number, Instagram account and Meta Business account all belong to Saba Art. We only connect the assistant to them.

Investment

A one-time cost for each phase, support included for the first three months after go-live, and small running costs paid to the services the assistant uses.

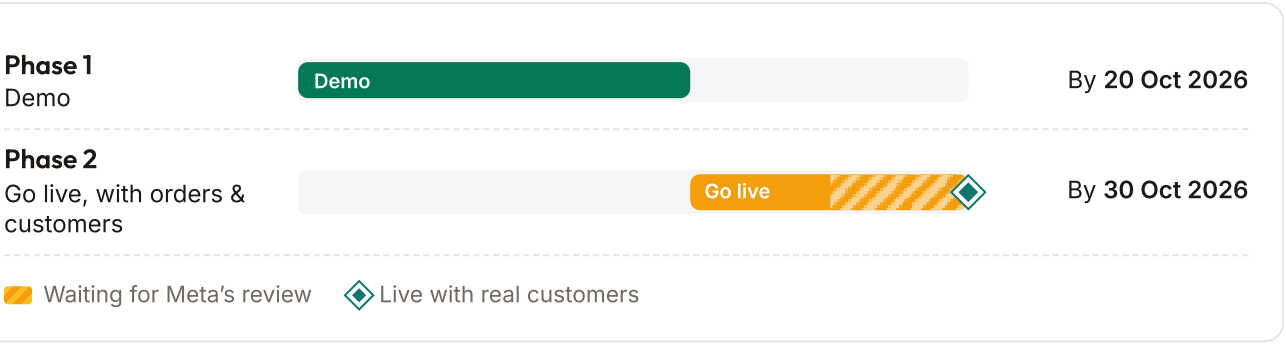

One-time	
Phase 1 — Demo AI replies, hand-over, dashboard for you and your helpers, price-list editing, reports, activity history and test mode. Paid as the advance.	**₹15,000**
Phase 2 — Go live, with orders & customers Connect WhatsApp & Instagram, Meta verification, replies to real customers, phone and email alerts, order board and customer lists.	**₹20,000**
Total one-time	**₹35,000**
Support & maintenance	
First 3 months after go-live Monitoring, fixes, small updates, price-list help and renewing connections.	**Included**
After 3 months Charged based on the issues that come up and any new requirements.	Cost may vary
Running costs Paid to service providers — billed by them directly or passed through at cost	
AI usage (Google Gemini) Grows with the number of messages answered.	Under process
Server hosting & database Keeps the assistant and dashboard running, and your chats stored.	Under process
WhatsApp messaging (Meta) Replies within 24 hours of a customer's message are currently free; other messages are charged by Meta per message.	Based on usage
Email notifications Hand-over alerts and helper welcome emails.	Free

PAYMENT TERMS

Two payments — ₹15,000 advance to start the demo phase, and ₹20,000 at go-live.

Timeline

The two phases run one after another, each with a target date.

Meta's review is outside our control. Meta (the company behind WhatsApp and Instagram) must verify your business and approve the app before we can go live. We prepare everything in advance and keep you updated, but how long the review takes is decided by Meta — so the 30 October go-live date depends on Meta's approval.

Support & why Tecza

What support covers

Included for the first 3 months after go-live.

- Round-the-clock monitoring, with automatic alerts if anything goes down
- Fixing any issues that come up
- Keeping your WhatsApp and Instagram connections renewed
- Help updating your prices and products
- A monthly summary of how the assistant is used

Why Tecza

- **Built for Saba Art** — around your products, prices and customers, not a generic chatbot.
- **Simple to use** — one dashboard on your phone for every chat.
- **Safety first** — sensitive matters always come to you. It never guesses.
- **You own your data** — your customers, chats and price list belong to Saba Art.

Next steps

Four simple steps from here to your assistant answering real customers.

1
Review this proposal
Take your time and note any questions.

2
Live demo walkthrough
See the working demo answer real-style messages.

3
Confirm phases and sign
Choose the phases you want and sign below.

4
Advance & we begin
With the ₹15,000 advance, we complete the demo, then take you live.

Acceptance

By signing below, both parties agree to go ahead with the selected phases on the prices and terms in this proposal.

Phases confirmed: ☐ Phase 1 — Demo ☐ Phase 2 — Go live, with orders & customers
